Dear Sir:

As related in our phone conversation today, I find it necessary to request a thirty day extension for the holding of three drums of hazardous waste. The waste is dry tank residue from leaded gasoline blending and contains 96.4 mg/l tetraethyl lead and 970 mg/l reactive sulfides.

Several disposal sites were contacted, and after considerable delay, I was notified they could not handle the material due to the sulfide content. Mr. Henry Boyer of Ashland Chemical agreed to handle the waste, but the necessary paper work has not been completed to date. The material will go either to TWI Incineration at Sauget, or to the landfill at Emelle, Alabama.

Our ninety day holding period will expire on May 8, and conceivably the material will be gone by then. However, if we can be granted the thirty day extension, it would be much appreciated.

RECEIVED

APR 01 1985

Thank you for any assistance you can give us.

APR 29 1985

Sincerely,

CLARK OIL & REFINING CORPORATION

C. E. Knipping
